

Scintillator Trigger Efficiency Update

???

G.S. Varner
30oct2017

Previous Clustering Failed (periodic structure)

entries/Cluster: (TrigDAC = 200 counts)

Full 0.1 second live time (64k hits)

entries/Cluster: (TrigDAC = 200 counts)

10M Ctime interval (~10ms)

entries/Cluster: (TrigDAC = 200 counts)

100k Ctime interval (can't identify bachelor hits)

entries/Cluster: (TrigDAC = 200 counts)

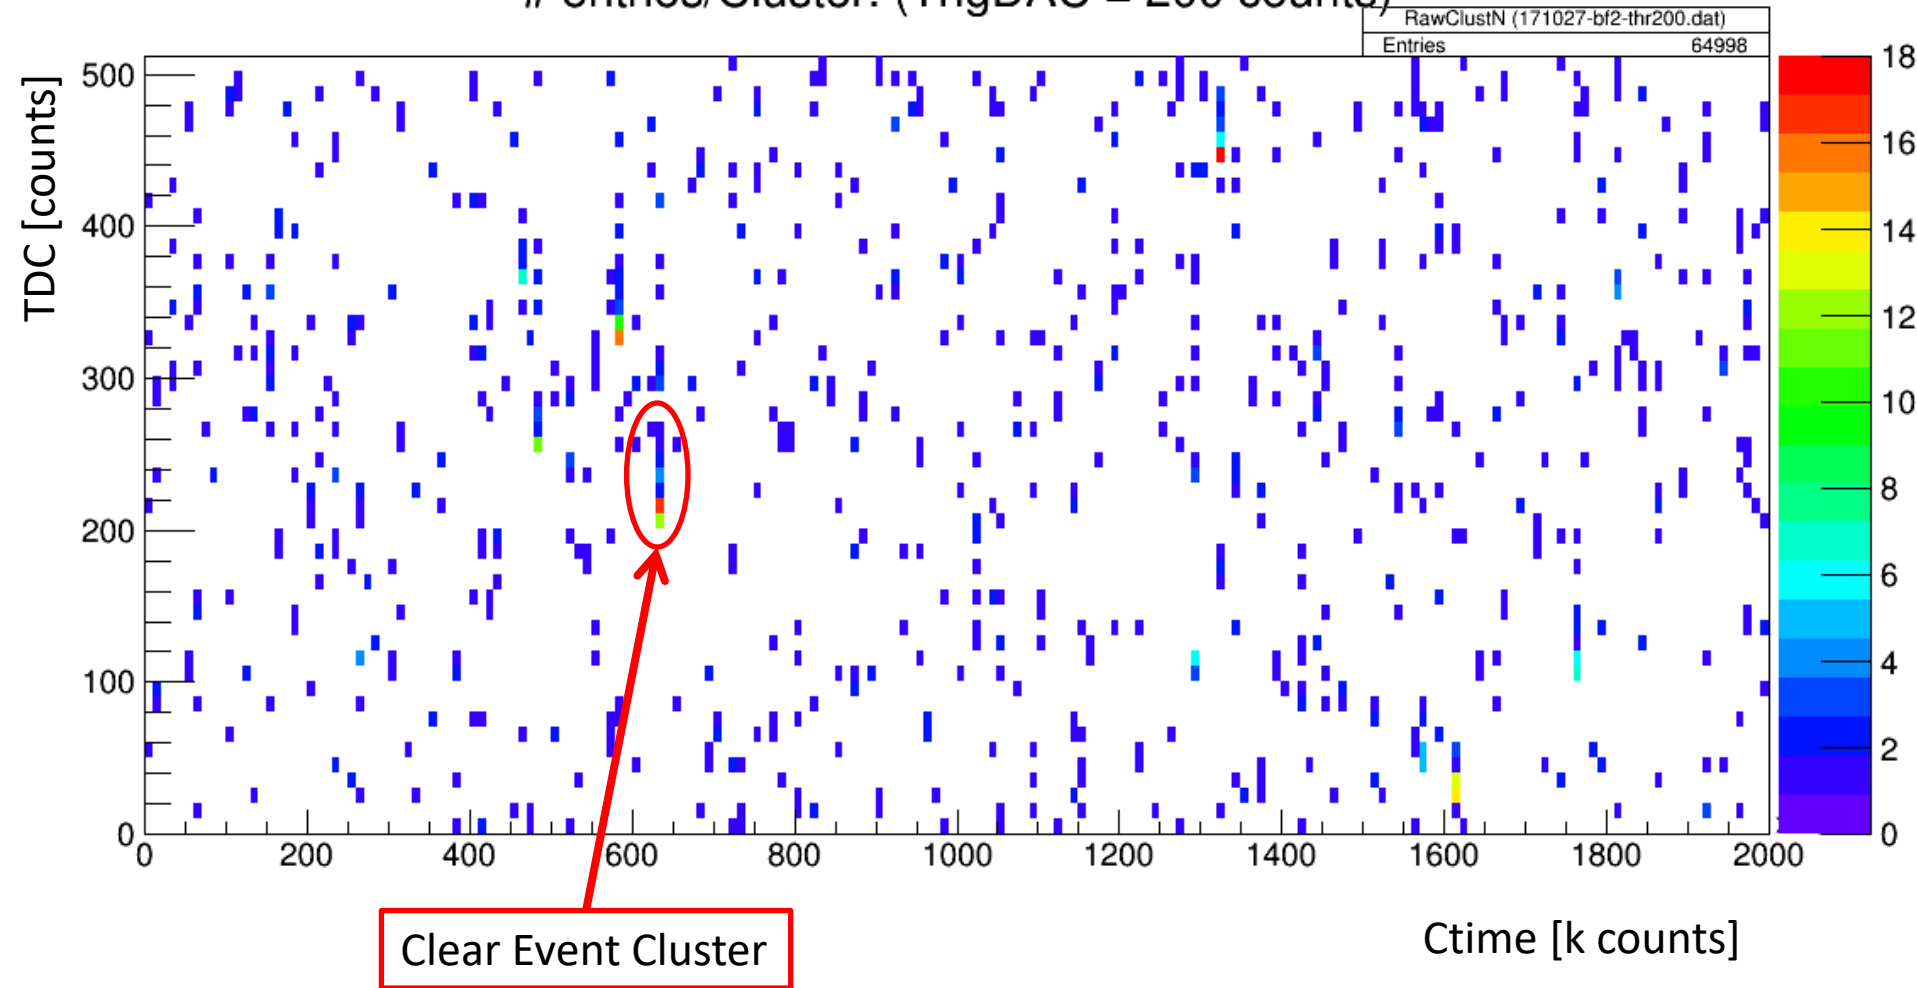

TDC % Ctime correlations

entries/Cluster: (TrigDAC = 200 counts)

TDC % Ctime correlations

entries/Cluster: (TrigDAC = 200 counts)

TDC % Ctime correlations

Are these part of it?

entries/Cluster: (TrigDAC = 200 counts)

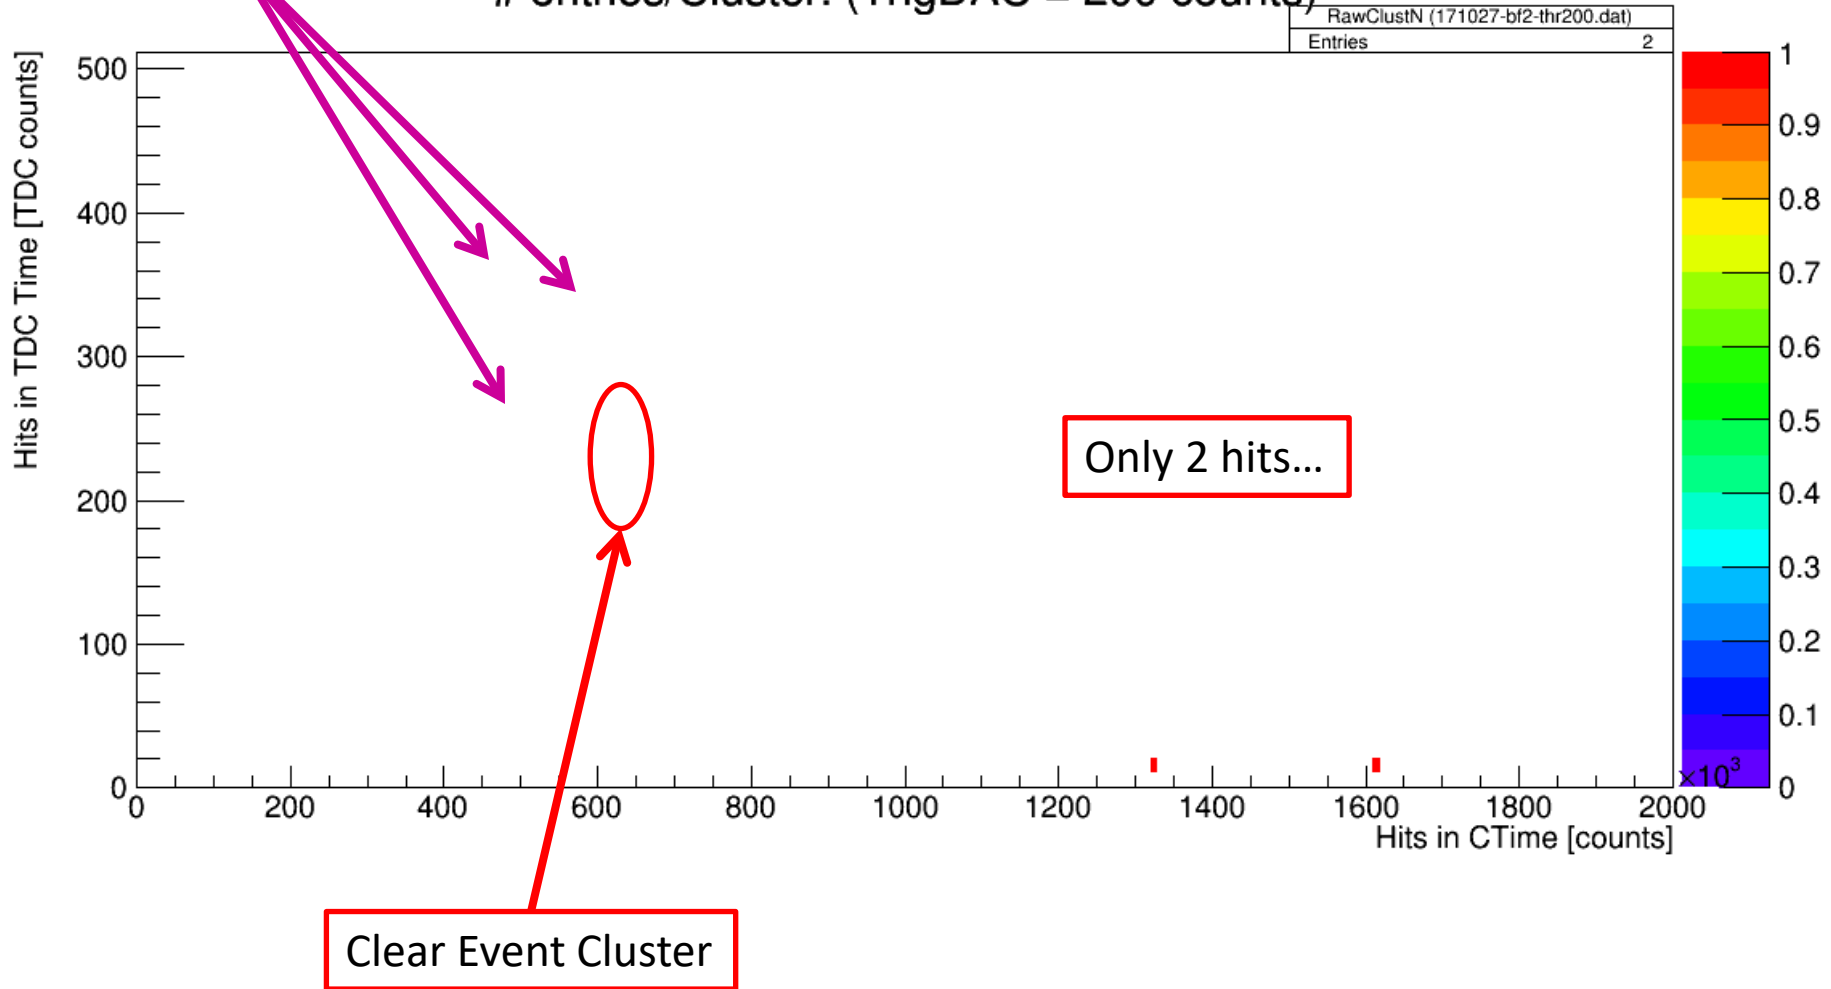

Clear Event Cluster

Scintillator Only

Are these part of it?

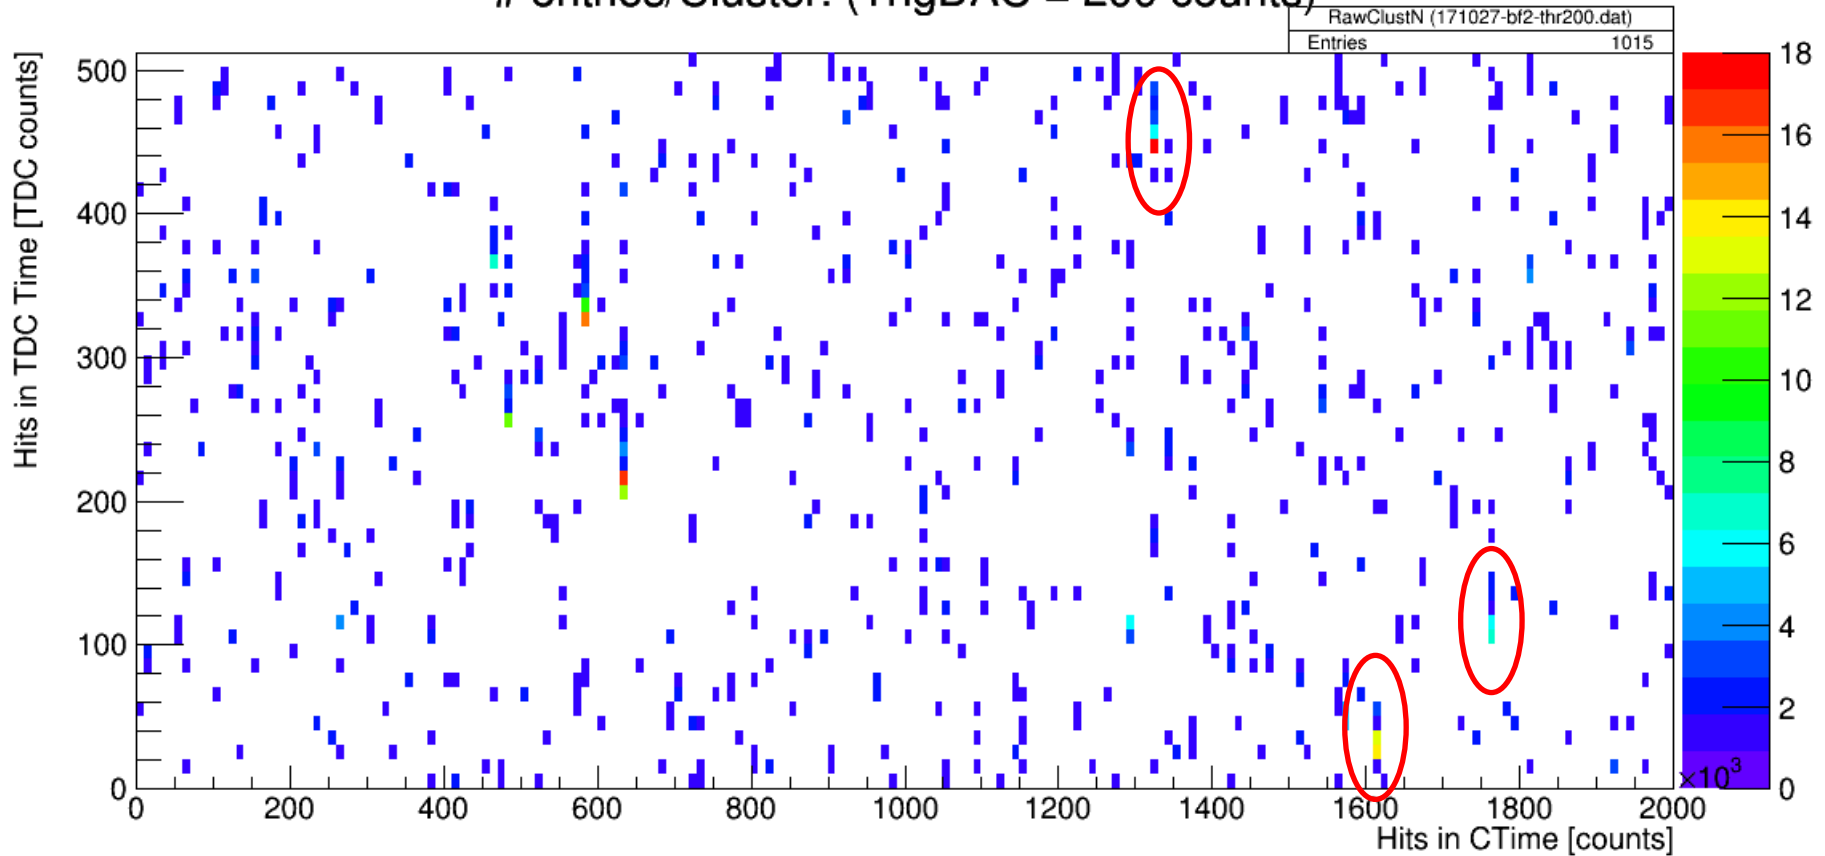

entries/Cluster: (TrigDAC = 200 counts)

All layers

Stats now correct
(~1.7% of run)

entries/Cluster: (TrigDAC = 200 counts)

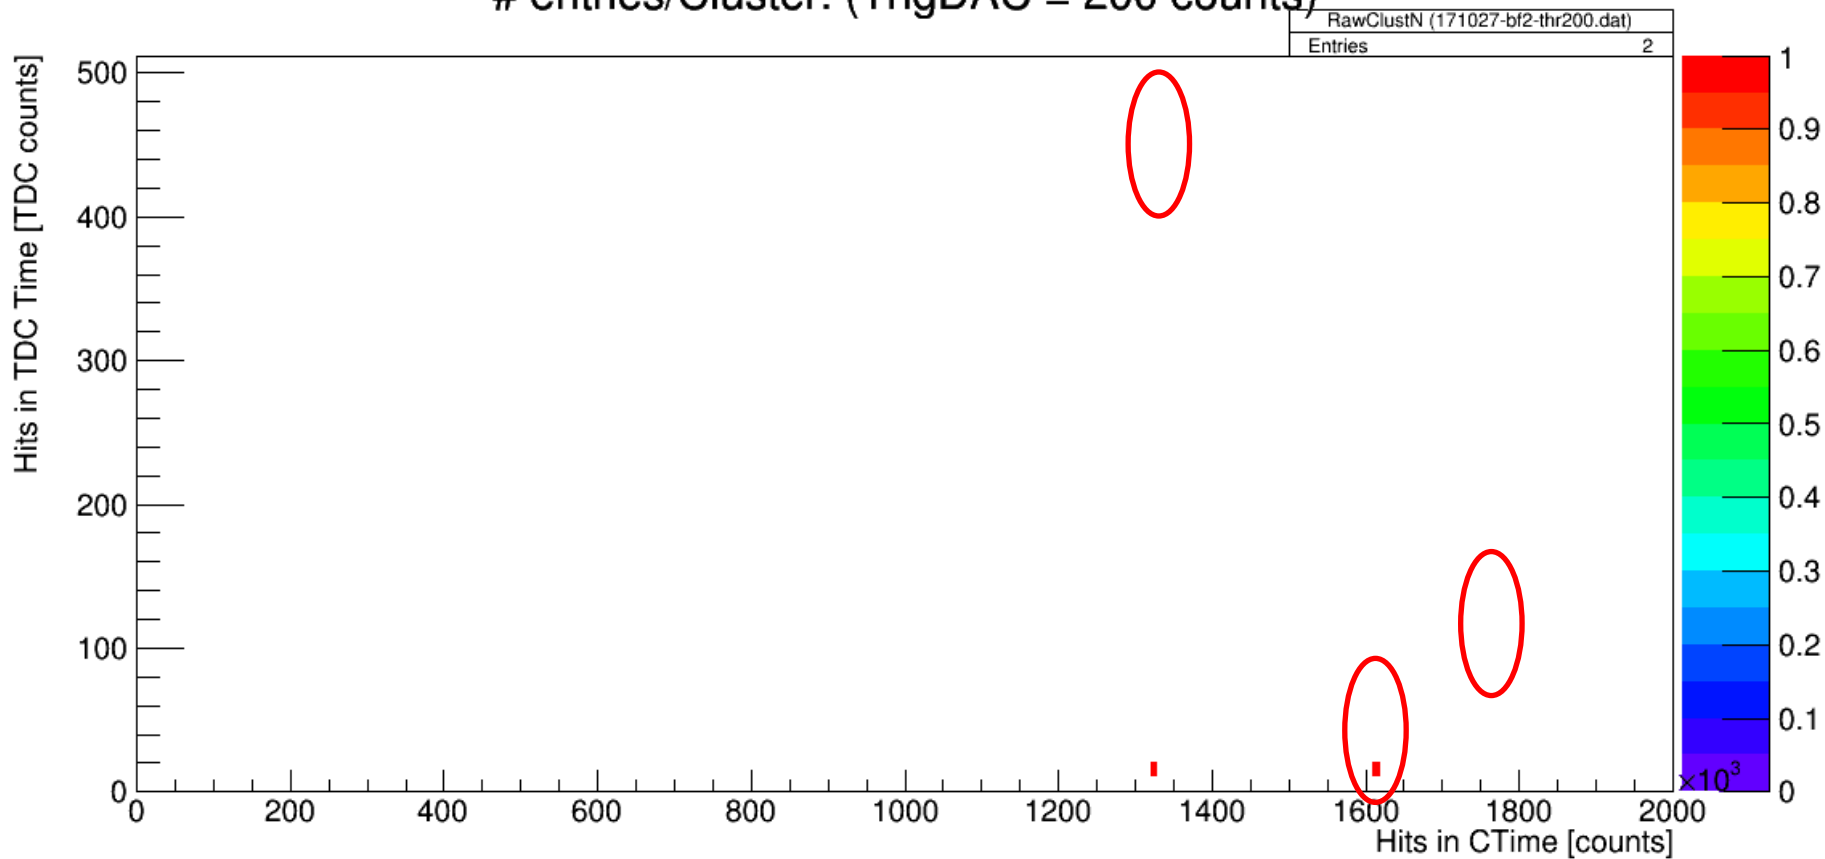

Additional Cluster candidates

Scint only

Stats now correct
(~1.7% of run)

entries/Cluster: (TrigDAC = 200 counts)

Additional Cluster candidates

All layers (highest threshold)

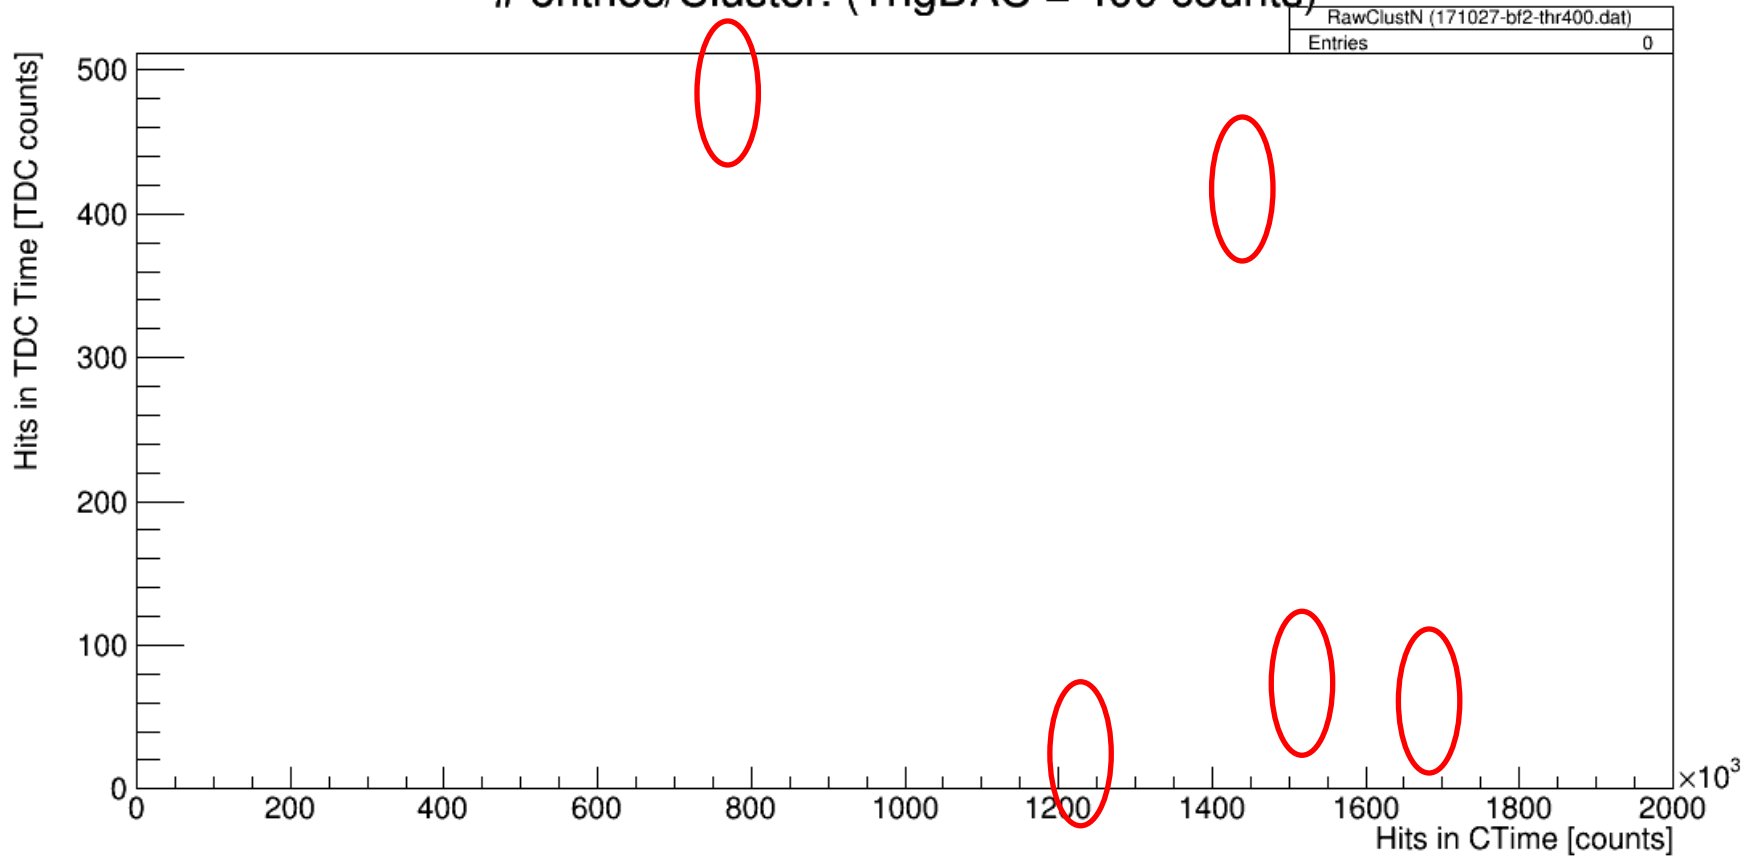

entries/Cluster: (TrigDAC = 400 counts)

Cluster candidates?

Scint only (highest threshold)

entries/Cluster: (TrigDAC = 400 counts)

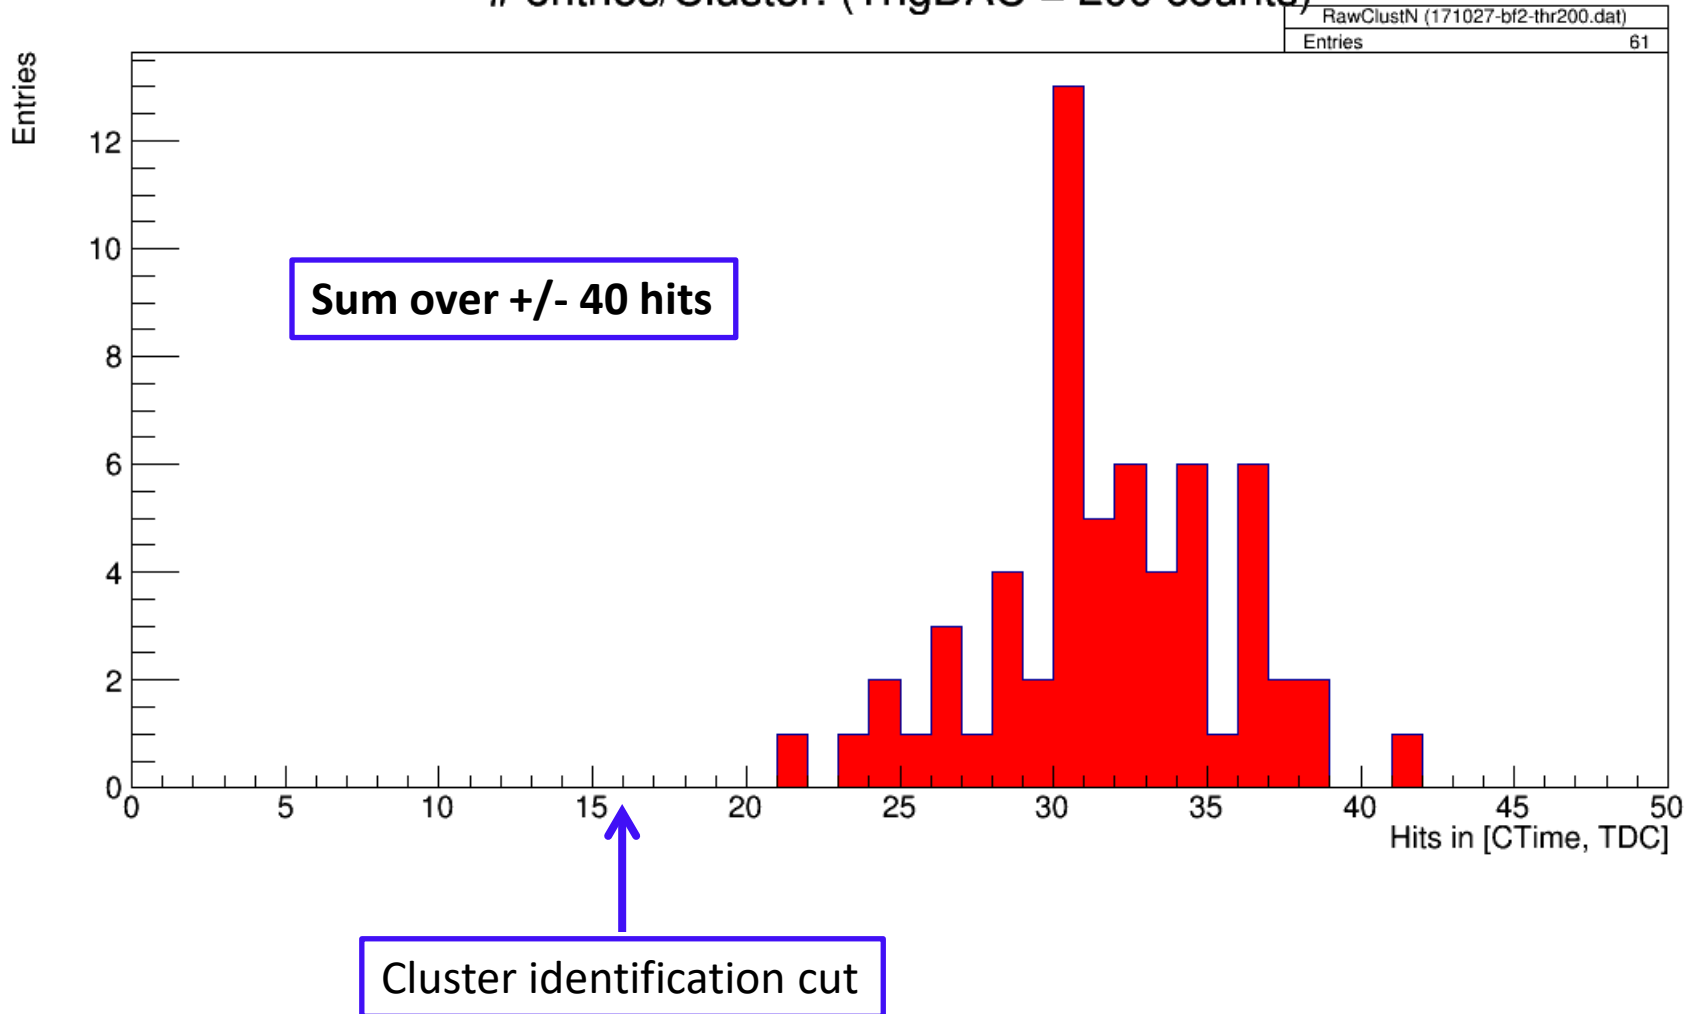

No Events!!!

New Cluster Algorithm

$|TDC < 20|$ & $|Ctime < 2000|$

entries/Cluster: (TrigDAC = 200 counts)

New Cluster Algorithm

$|TDC < 20|$ & $|Ctime < 2000|$

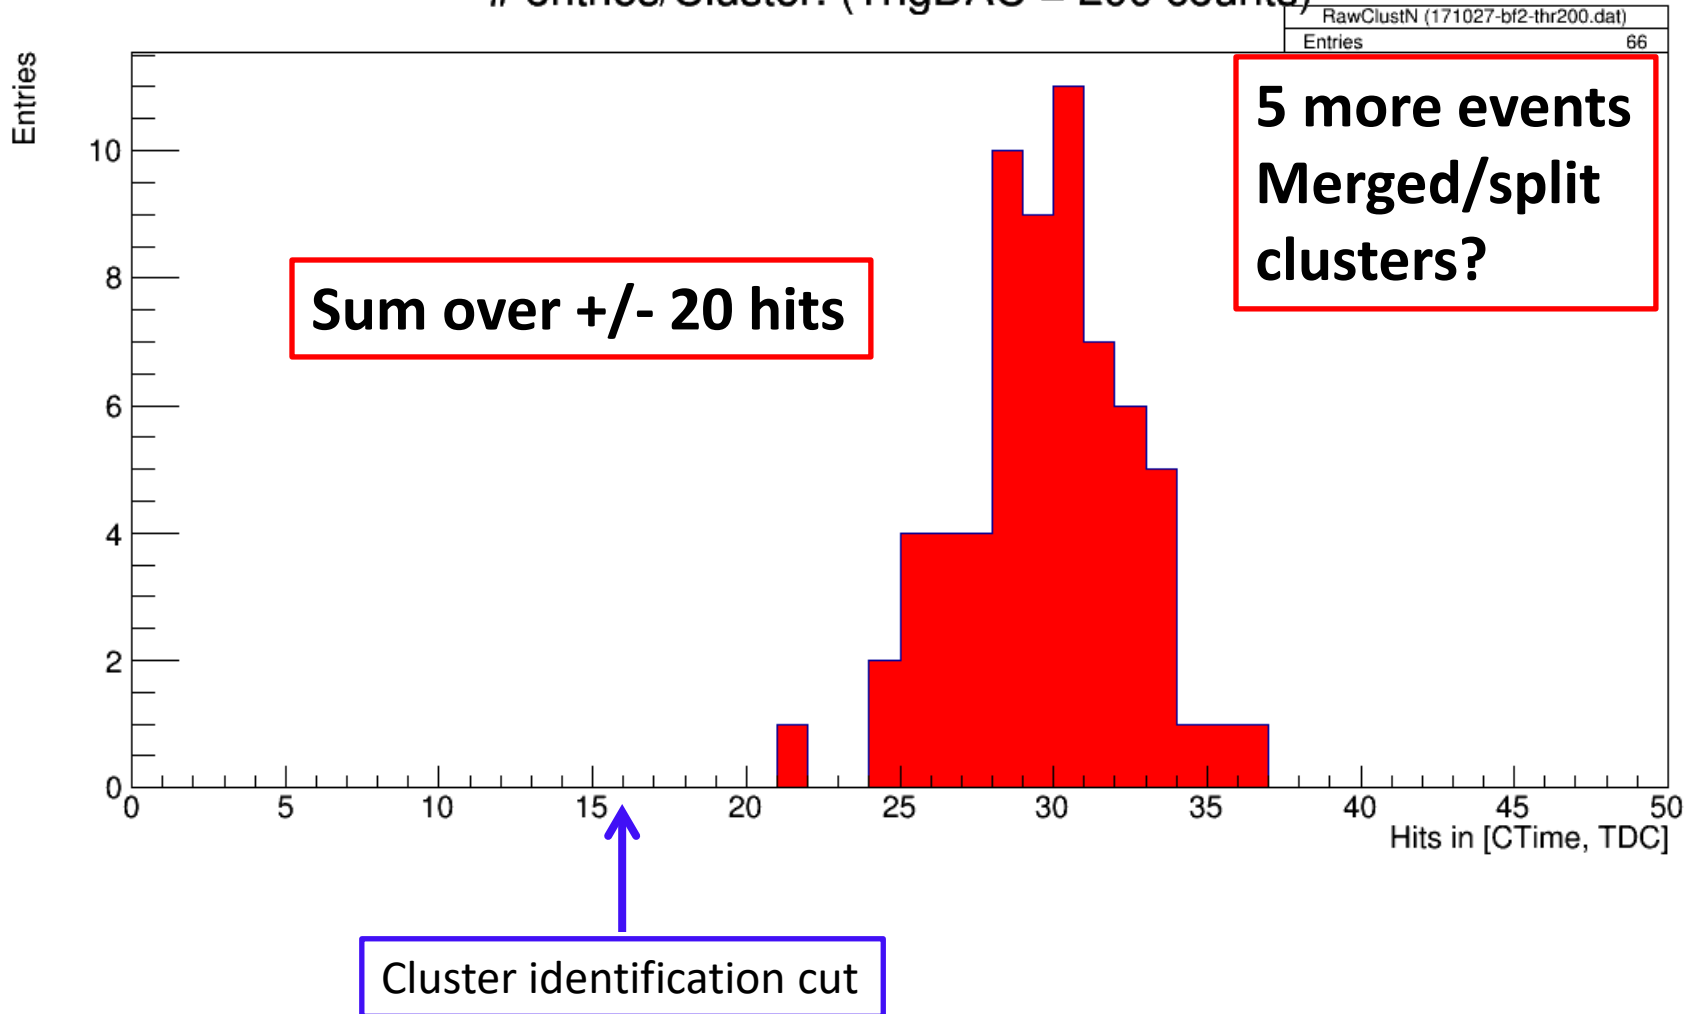

entries/Cluster: (TrigDAC = 200 counts)

New Cluster Algorithm

|TDC<20| & |Ctime<2000|

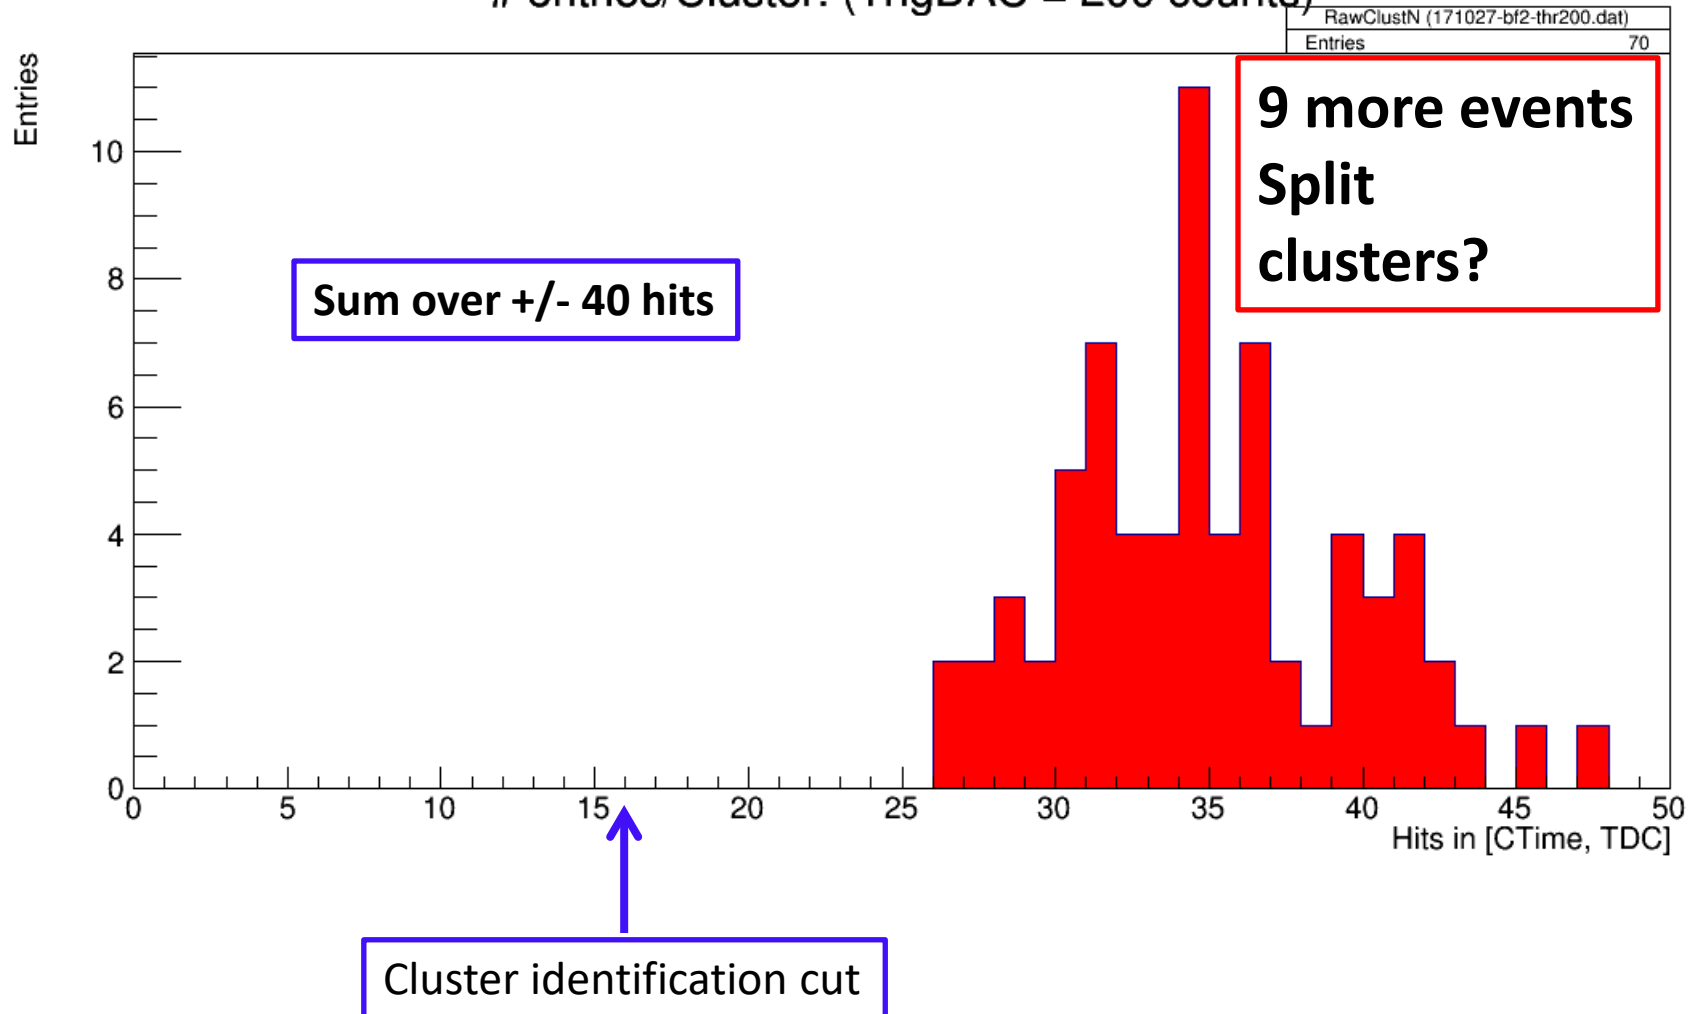

entries/Cluster: (TrigDAC = 200 counts)

New Cluster Algorithm

$|TDC < 40|$ & $|Ctime < 10000|$

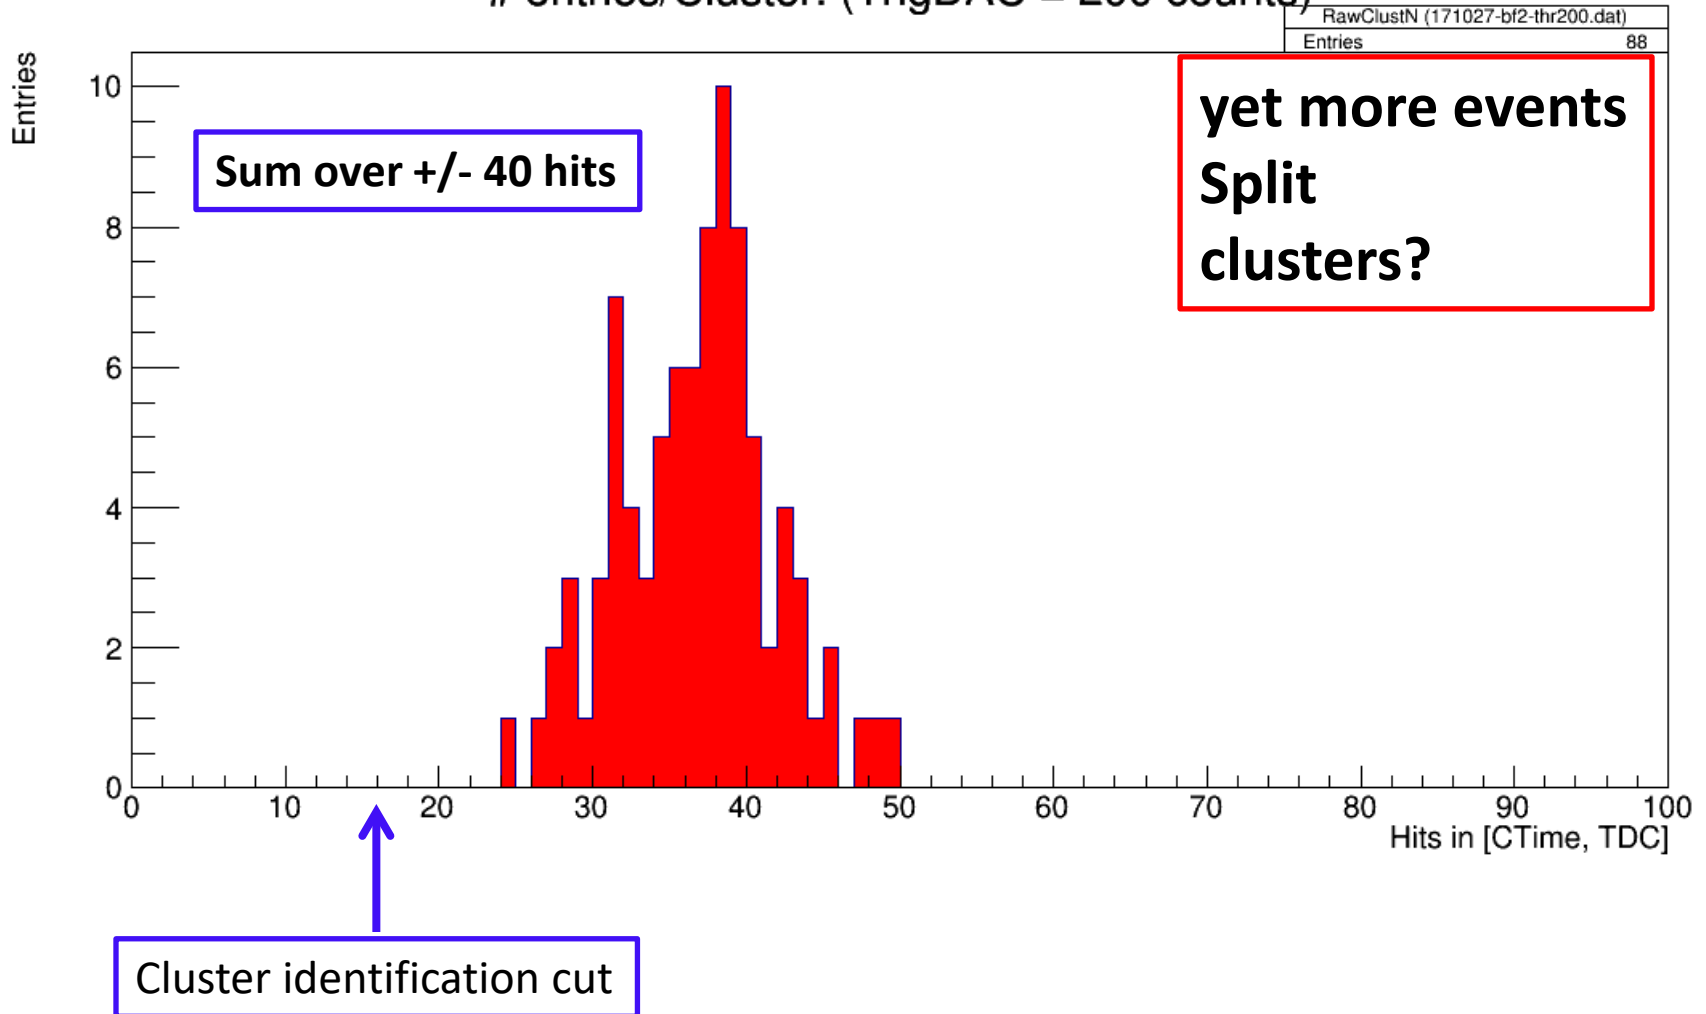

entries/Cluster: (TrigDAC = 200 counts)

New Cluster Algorithm

|TDC<40| & |Ctime<20000|

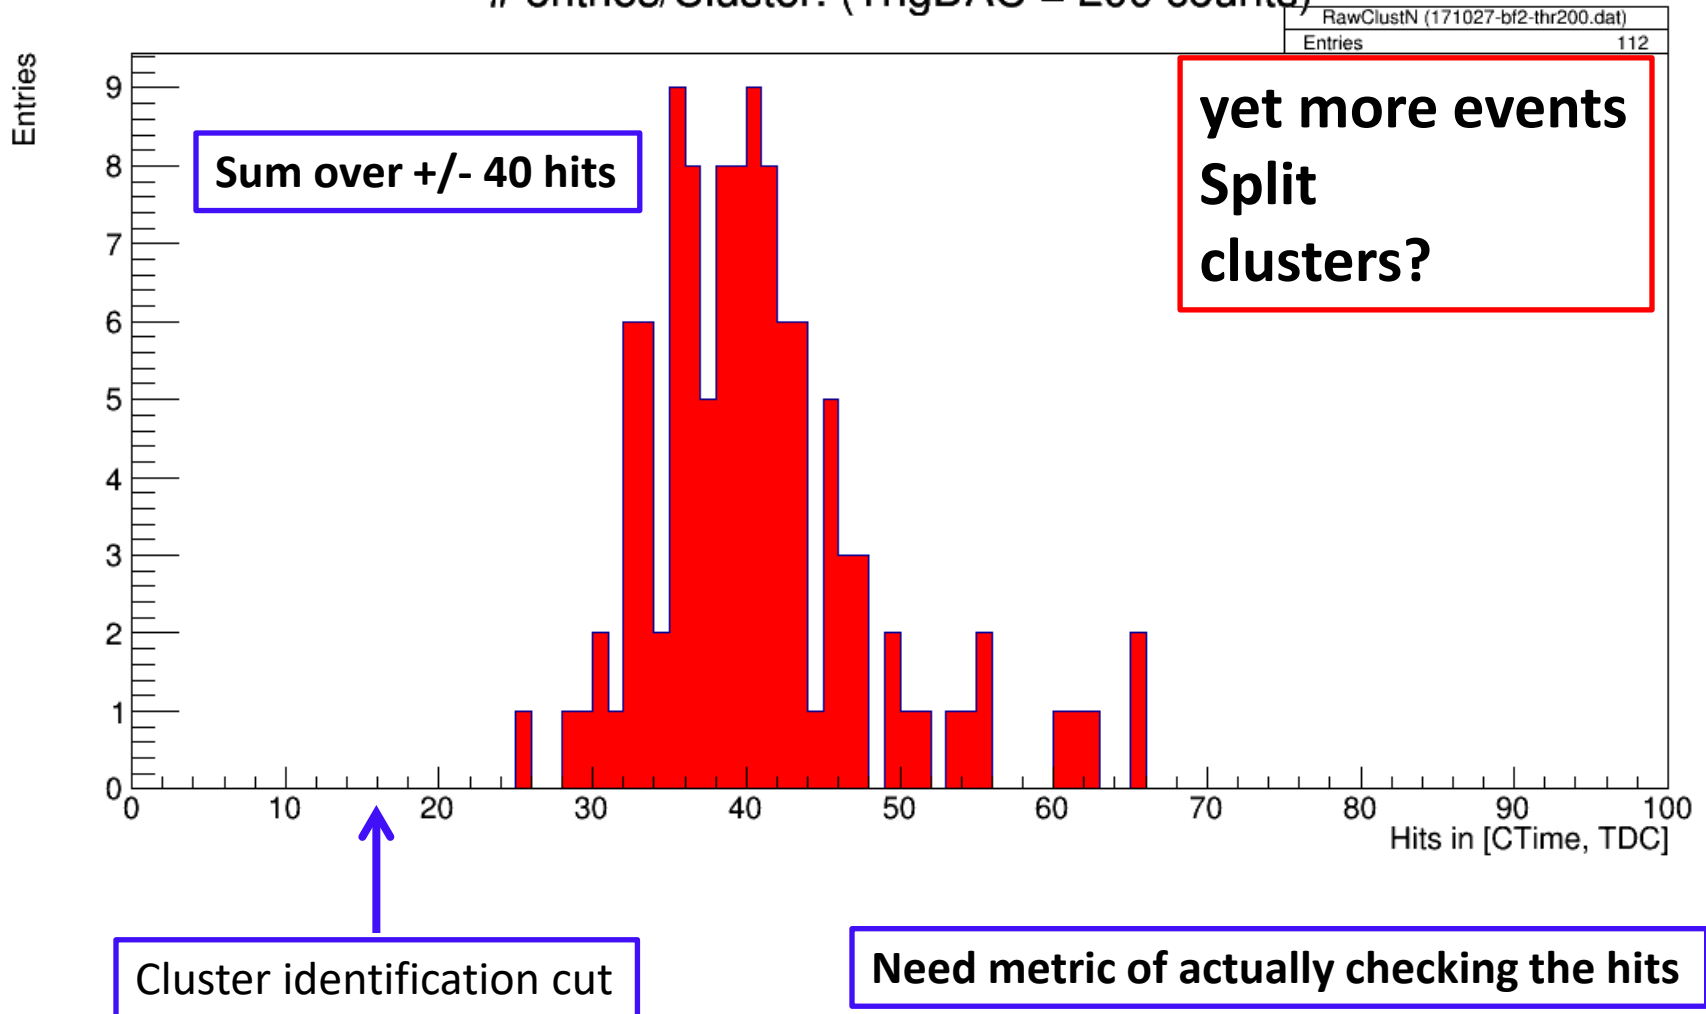

entries/Cluster: (TrigDAC = 200 counts)

New Cluster Algorithm

|TDC<80| & |Ctime<20000|

entries/Cluster: (TrigDAC = 200 counts)

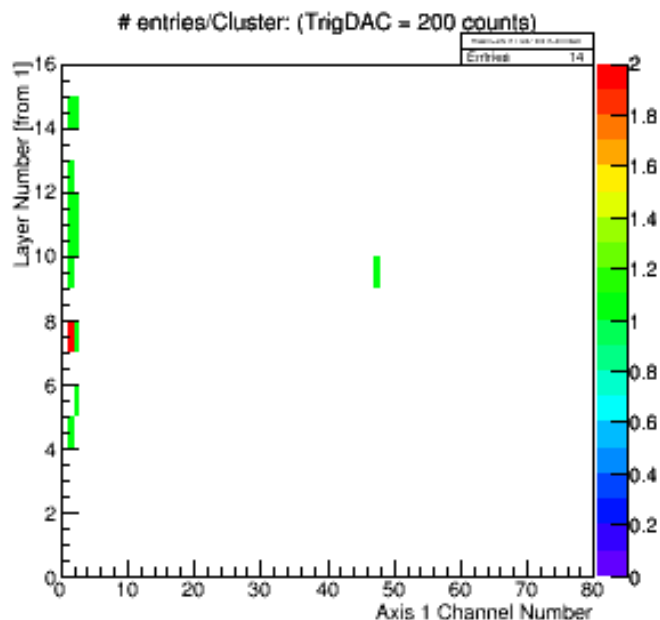

Initial Event displays...

Can play animated gif to see all cluster events (note that now understand a bit better evolution of number of clusters with these cuts)

Initial Event displays...

And will eventually want to implement a projection cut, to ensure efficiency calculation is correct.

However...

Scint Trigger Efficiency \sim zero

- Without bias as to timing (all hits in run reported), \sim 1 second livetime, 70-100 muons

Layer	DAC = 400	DAC = 300	DAC = 200	DAC = 100
0	9	18	37	67
1	1	11	24	53
2	2952	Same within	errors	3086
3	4534			4606
4	3090			3266
5	5588			5362
6	4512			4555
7	3941			3847
8	1859			1705
9	4465			4501
10	4978			5116
11	6642			6503
12	5818			5862
13	8511			8538
14	8028			7933

- **Thresholds still too high?**
- **All hits being reported?**
