A spinning BH is modelled with the Kerr metric

$$g_{\mu\nu} := \eta_{\mu\nu} + \frac{R_s r(\mathbf{x})^3 \ell_{\mu} \ell_{\nu}}{r(\mathbf{x})^4 + A^2 z^2}$$

Cosmologically Coupled Compact Objects

Croker, Zevin, Farah, Nishimura, Tarlé K.S. Croker et al. 2021 *ApJL* 921 22

A spinning BH is modelled with the Kerr metric

$$g_{\mu\nu} := \eta_{\mu\nu} + \frac{R_s r(\mathbf{x})^3 \ell_{\mu} \ell_{\nu}}{r(\mathbf{x})^4 + A^2 z^2}$$

Where

Cosmologically Coupled Compact Objects 0000

A spinning BH is modelled with the Kerr metric

$$g_{\mu\nu} := \eta_{\mu\nu} + \frac{R_s r(\mathbf{x})^3 \ell_{\mu} \ell_{\nu}}{r(\mathbf{x})^4 + A^2 z^2}$$

Where

- $\eta_{\mu\nu}$ is static spacetime
- \blacktriangleright R_s encodes mass

A spinning BH is modelled with the Kerr metric

$$g_{\mu\nu} := \eta_{\mu\nu} + \frac{R_s r(\mathbf{x})^3 \ell_{\mu} \ell_{\nu}}{r(\mathbf{x})^4 + A^2 z^2}$$

Where

- $\eta_{\mu\nu}$ is static spacetime
- ► R_s encodes mass
- ▶ A^2z^2 encodes spin

Croker, Zevin, Farah, Nishimura, Tarlé K.S. Croker et al. 2021 *ApJL* 921 22

A spinning BH is modelled with the Kerr metric

$$g_{\mu\nu} := \eta_{\mu\nu} + \frac{R_s r(\mathbf{x})^3 \ell_{\mu} \ell_{\nu}}{r(\mathbf{x})^4 + A^2 z^2}$$

Where

- $\eta_{\mu\nu}$ is static spacetime
- ► R_s encodes mass
- ▶ A^2z^2 encodes spin
- $\blacktriangleright \ r({\bf x})$ is a generalized radius

A spinning BH is modelled with the Kerr metric

$$g_{\mu\nu} := \eta_{\mu\nu} + \frac{R_s r(\mathbf{x})^3 \ell_{\mu} \ell_{\nu}}{r(\mathbf{x})^4 + A^2 z^2}$$

At large distances from the hole

$$\lim_{r(\mathbf{x})\to\infty}g_{\mu\nu}=\eta_{\mu\nu}$$

 \therefore Kerr's object exists in a static universe

Croker, Zevin, Farah, Nishimura, Tarlé K.S. Croker et al. 2021 *ApJL* 921 22

A spinning BH is modelled with the Kerr metric

$$g_{\mu\nu} := \eta_{\mu\nu} + \frac{R_s r(\mathbf{x})^3 \ell_{\mu} \ell_{\nu}}{r(\mathbf{x})^4 + A^2 z^2}$$

At large distances from the hole

$$\lim_{r(\mathbf{x})\to\infty}g_{\mu\nu}=\eta_{\mu\nu}$$

 \therefore Kerr's object exists in a static universe

But we don't exist there...

Cosmologically Coupled Compact Objects

Example coupling with k = 0.5

Croker, Zevin, Farah, Nishimura, Tarlé K.S. Croker et al. 2021 *ApJL* 921 22 University of Hawai'i P&A, HEP Journal Club, January 18th, 2022

Physics behind the altered distributions

Cosmological mass growth also causes angular-momentum preserving orbital decay

- Systems with initially negligable radiative losses can now merge
- ▶ Depending on k, semimajor axes ≤ 10⁴ AU can now visibly merge, c.f. ≤ 10⁻¹AU for BHs
- Tight binaries are culled at high redshift with low mass, and so less visible

Constraint of k with quasars

Crude upper bounds on k can be placed

- ▶ Observation: SMBH in quasars of $\sim 10^9 M_{\odot}$ at z = 6
- \blacktriangleright Non-observation: SMBH in excess of $\sim 10^{11} M_{\odot}$ today

 $\pm 0.4 \text{ dex} \implies k \lesssim 3$

Consistent with theoretical upper bound from DEC

Conclusions

- Placing the Kerr idealization into a realistic universe allows for new dynamics in time
- Cosmological coupling in relativistic objects is theoretically and observationally well-motivated
- Cosmological coupling in astrophysical BHs eases tension between stellar population synthesis and LIGO–Virgo observations
- Coupling strength can be measured in many ways
