

**How to Make New Equation
according to New Grammar**

$$\begin{aligned}
 & i \frac{\hbar}{a} \lim_{\varepsilon \rightarrow 0} \frac{\Phi[\chi(\square - \varepsilon)] - \Phi[\chi]}{\varepsilon} \\
 & = \int_{-\infty}^{\infty} dt \left\{ \frac{1}{2m} \left[-i \frac{\hbar}{a} \frac{\delta}{\delta \chi(t)} \right]^2 \right. \\
 & \qquad \qquad \qquad \left. + V(\chi(t)) \right\} \Phi[\chi]
 \end{aligned}$$

This reduces to ordinary schrödinger equation:

$$\begin{aligned}
 & i \hbar \frac{\partial}{\partial t} \Psi(\mathbf{x}, t) \\
 & = \left\{ \frac{1}{2m} \left[-i \hbar \frac{\partial}{\partial \mathbf{x}} \right]^2 + V(\mathbf{x}) \right\} \Psi(\mathbf{x}, t)
 \end{aligned}$$

in disentangled case: $M_{\text{new}}(\Phi) = M_q(\Psi)$

Or we must seek such an equation.
