Recent Results from the Telescope Array Experiment - I

Saturday, January 9, 2016 9:45 AM (45 minutes)

The Telescope Array (TA) experiment is a large experiment located in Utah, USA, to study ultrahigh energy cosmic rays. TA is a hybrid experiment, consisting of a surface detector and a fluorescence detector. In this, the first TA talk, G. Thomson will cover the spectrum of cosmic rays from $\log(E)$ of 15.6 to 20.3, several anisotropy results including the TA Hotspot, and plans for the TA_{x4} project to increase the experiment's aperture by a factor of 4. The second talk will be given by J. Belz.
